

INCIDENT INVESTIGATION REPORT

Status: OPEN

1. INITIAL DETAILS

Incident Title:	Video Tutorial Demo Incident 1776498771139		
Site / Location:	HQ-01	Date & Time:	2026-04-18 @ 10:15
Incident Type:	Near Miss	Severity Level:	Level A
Category:	COSHH / Chemical Exposure	Equipment Involved:	Forklift FL-12
Affected Person:	Sarath Chandra (Internal)		

DESCRIPTION OF EVENT

An operator slipped on a hydraulic oil leak from a forklift hose while reversing stock into the loading area. The hose had been reported earlier, the floor became slippery, and the operator twisted his ankle while trying to avoid the spill.

IMMEDIATE ACTIONS TAKEN

The area was isolated, absorbent pads were deployed, first aid assessed the ankle, and the forklift was tagged out for inspection.

2. INVESTIGATION TEAM

Name	Role / Designation
Sarath Chandra	User

Name	Role / Designation
External Safety Advisor (EXT)	External Investigator / Contractor

INVESTIGATION SUMMARY & NOTES:

The investigation team reviewed witness statements, maintenance complaints, and scene photographs. The focus was on leak reporting, floor control, and refresher competence for equipment checks.

3. ROOT CAUSE ANALYSIS

3.1 FINAL ROOT CAUSE CONCLUSION

The root cause was a known forklift hose defect combined with delayed maintenance escalation and insufficient refresher training on spill isolation and defect reporting.

3.2 THE 5-WHYS LOGIC PATHS

INFERENCE ENGINE ANALYSIS

1. Why 1 (The Event): The incident occurred due to a loss of containment involving component/part.
2. Why 2 (Immediate Cause): There was a failure in the primary control measure protecting the worker from the component/part.
3. Why 3 (Contributing Factor): The component/part was operating outside of normal/safe parameters.
4. Why 4 (Systemic Factor): Previous reports regarding the component/part were not actioned or escalated appropriately.
5. Why 5 (Root Cause): Breakdown in the safety culture and the Corrective Action (CAPA) tracking process.

3.3 FISHBONE DATA EXTRACTED

ENVIRONMENT	No specific deviations identified in initial narrative
MACHINE	No specific deviations identified in initial narrative
MAN	Task execution error during standard operation
MATERIAL	No specific deviations identified in initial narrative
METHOD	Breakdown in defect reporting / CAPA escalation; Failure to follow established safe systems of work

3.4 FAULT TREE ANALYSIS

Top Event: LOSS OF CONTAINMENT [AND]

- **Immediate: Control Failure** [OR]
 - **Condition: Hazard Present** [EVENT]
 - **Action: Task execution error during standard operation** [EVENT]

4. CORRECTIVE & PREVENTIVE ACTIONS (CAPA)

Action Description	Site	Owner	Due Date	Status
Review and update specific Risk Assessment for task involving component/part	HQ-01	Unassigned		OPEN
Conduct safety stand-down regarding loss of containment hazards	HQ-01	Unassigned		OPEN
Audit preventative maintenance schedule for all component/parts	HQ-01	Unassigned	2026-04-30	OPEN
Conduct refresher training on spill response and forklift defect reporting 1776498771139	HQ-01	Unassigned		OPEN

5. REVIEW, SIGN-OFF & HIRA LINKAGE

RISK ASSESSMENT (HIRA) REVIEWED & UPDATED:

NO / PENDING
